**Steve Bernstein
Arlington Eye Physicians –
Arlington, Illinois**

“Being an Optician going on 43 years, I can now say to my patients that I do it all, and that 98% of the lenses I sell are made by me in-house. With the FastGrind system I can offer most patients same day service, from Single Vision to Progressive lenses. I can offer Anti glare, photochromic, and polarized lenses for sunglasses as well.

As far as lens availability; I have been wearing Varilux for most of my adult life. Since purchasing the FastGrind system, I am now wearing the new ADDvantage HD Plus lenses with Conversion gray and Antiglare. I am not lying when I say I honestly do not see a difference from Varilux. I have beautiful, clear vision in the distance with no distortion, and the intermediate and near channel are clear and wide. When I put on my new ADDvantage HD Plus lenses I did not have any adaptation issues whatsoever.

Now let’s talk about saving and making money. To compare apples to apples, let’s look at one of the best which made it easy for me to purchase the FastGrind system. Progressive Hi Index lenses with photochromic and AR with the FastGrind System is a fraction of the cost. Not to mention I am the quality inspector and I won't be receiving anymore lenses that I would have to return and have an unhappy patient with a delay. If you already have an edger and a small space available you too can be surfacing your own lenses and making more money. I highly recommend looking into the FastGrind system. Give them a call today; you have nothing to lose but everything to gain.”
